

# **Effective Social Protection for a Transforming Economy and Society of Uzbekistan**

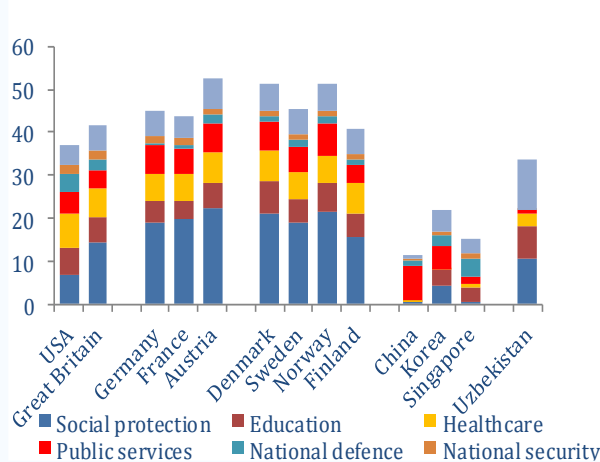

**Center for Economic Research  
Tashkent, 2014**

# Social Protection model of Uzbekistan: Different from any other foreign models

### Taxes and Social Payments, % of GDP

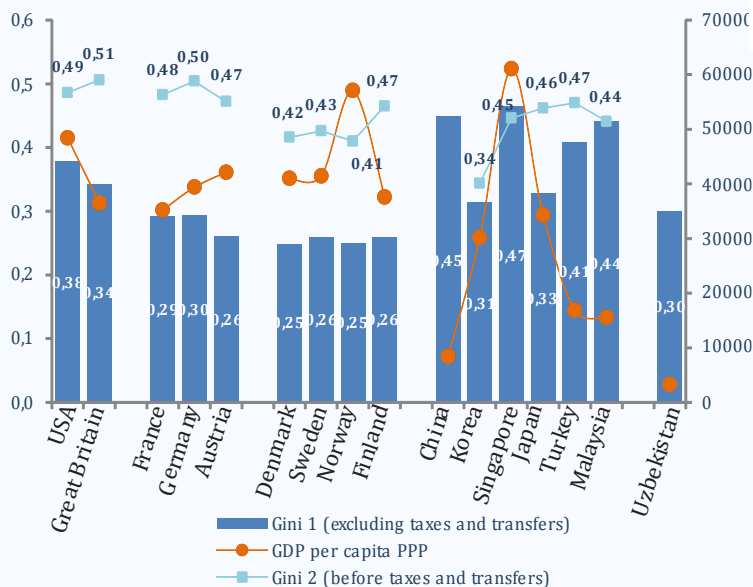

### Government Budget Expenditures, % of GDP

### Two polar models:

- **Option 1:** focus on safety net functions; generous social system → redistribution and fiscal burden
- **Option 2:** reduced social spending, incentives for private sector; relieved tax wedge;
- → Various models applied at various stages

### Level of development, redistribution and inequality

### GDP per capita & Economic Growth rate

→ Neither of the foreign models fully fit into a transforming Uzbekistan economy

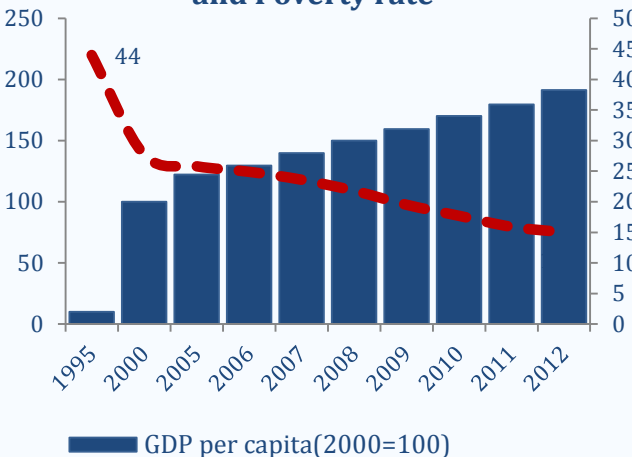

**Uzbekistan needs to select its own path and develop its own model**

# Uzbekistan in Transition: Evolution of SP policies and schemes

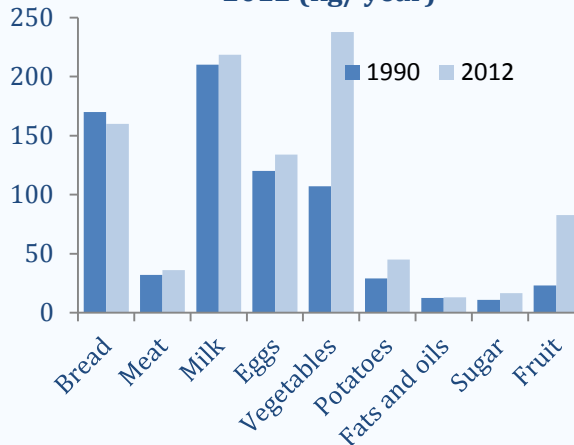

Period	Phases of transformation	Policy instruments
Early 1990-s	<p>Main task – to mitigate major transitory adverse effects of a sharp drop in revenues in early years of transition</p> <p>→ Universal social support</p>	<ul style="list-style-type: none"> <li>- Subsidized prices,</li> <li>- Allowances and compensation to all families</li> </ul>
Mid 1990-s – Early 2000-s	<ul style="list-style-type: none"> <li>- Introduction of targeted financial assistance for the vulnerable + measures on improving well-being of the population</li> <li>- Policies in education and public healthcare actively developed and implemented.</li> </ul>	<ul style="list-style-type: none"> <li>- Expansion and promotion of entrepreneurship, development of private form of ownership, incentives to stimulate economic activity of the population</li> <li>- Reduction and elimination of price subsidies,</li> <li>- Introduction of targeted financial assistance to low-income families (1994-1996),</li> <li>- Introduction of targeted support for families with children (1996-2002).</li> <li>- Annual investments to education at 7,6 % of GDP; public health declared as a priority sector (particularly maternal and children's health);</li> </ul>
Early 2000-s –Present	<p>Further transition to targeted social protection policies + Further investment into education and healthcare programs</p>	<ul style="list-style-type: none"> <li>- Replacement of specific preferences for the population with cash payments,</li> <li>- Further transition to targeted social assistance for low-income families</li> <li>- Decentralization of allocation and payment of allowances to low income families - given authorities transferred to local communities - makhallas</li> </ul>

# Uzbekistan in Transition: The SP model contributed to attainment of the development goals

**Welfare improvement and Poverty rate**

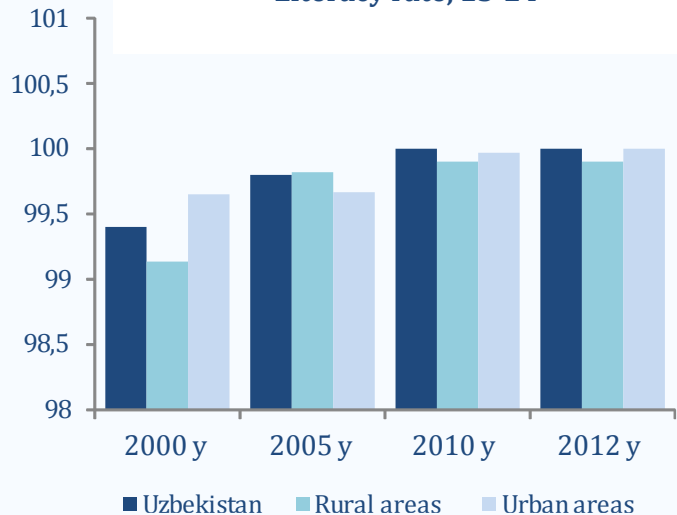

**Consumption of basic foods 1990 VS 2012 (kg/ year)**

**Maternal and infant mortality (1990-2012)**

**Literacy rate, 15-24**

**Expected longevity and mortality rate**

**High efficiency of the SP system during the difficult period of the reformation;**

- large-scale decline in living standards and impoverishment prevented;
- access to food maintained;
- access to free public health care and education maintained → high literacy rate sustained, expected longevity increased, maternal and infant mortality dropped;

**The SP system was in line and contributed to attainment of development goals and priorities.**

# Uzbekistan graduating from Transition: New development goals and economic transformation

Uzbekistan: Transformation of GDP structure to 2030, %

Transformation of employment structure: 2012 VS 2030

## Economic Transformations: Development goals for the future:

- Ensure *sustainable economic growth* rate at 7-8%;
- *Transformation of GDP structure* by increasing the share of processing industry from 9% in 2012 to 22% in 2030;
- Reformation of the *agricultural sector model*: focus on efficiency and multiplying effects rather than providing guaranteed source of income for large groups of the population;
- Transition to *production of services of higher sophistication*, that will allow to increase the proportion of the service sector in GDP from 45,1 % in 2012 to 55 % in 2030.

# Uzbekistan graduating from Transition: New development goals and social transformation

Main characteristics of society	1-st stage	2-nd stage
<b>Demographic features</b>	Birth and death rates decrease (b. r. = 20%, d. r. = 6-8%)	Birth and death rates level out (b.r. = 8-10%, d.r. = 8-10%)
<b>Family type</b>	Average family size = 5-7 Average household size =5-6 Families poly-nuclear, integrated into the community, children are obedient.	Average family size = 3.17 Average household size = 2.4 Families mononuclear, socially isolated, child needs to develop independence, egalitarian families.
<b>Education</b>	Share of higher education = 10% Vocational education is important  Education based on schools – formalization, empirical knowledge	Share of higher education = 20-50% Professional education in technical specialization and natural science becomes important Education is a main factor of social mobility Education in the information society– computerization, creative component
<b>Employment</b>	Primary and (partially) secondary sector Skilled and semi-skilled workers  Share of informal employment is above 20%	Secondary, tertiary and quaternary sector Professional and technical work (engineers, mathematicians etc., → Education becomes strongly linked to employment Share of informal employment = 10-20% The need to adapt and change the specialization throughout the lives. -> education for adults becomes important
<b>Population settlement pattern</b>	Share of urban population is below 50% Large differences between urban and rural areas	Share of urban population is above 50% New cities + developed rural areas The difference between urban and rural areas decrease
<b>Values , stereotypes (1)</b>	Survival values	Self-expression values
<b>Values, stereotypes (2)</b>	Low interpersonal trust, intolerance towards out-groups	High interpersonal trust, tolerance towards out-groups
<b>Values, stereotypes (3)</b>	Dominance of gender inequality stereotypes	Gender equality stereotypes
<b>Values, stereotypes (4)</b>	Dominance of collectivism	Dominance of individualism
<b>Values, stereotypes (5)</b>	Large informal sector	Dominance of rule of law

# **Uzbekistan graduating from transition:** **New development goals and Role of SP policies**

- Objectives of the economic and social transformations to 2030 are *fundamentally different* from the development goals of the transition period.
- Being a part of the overall development framework, social protection and social policy system should be revised:
  - In the *transition period*: SP system was aimed at eliminating the negative consequences of structural reforms;
  - After *graduating from transition*: social protection should also become a tool for the implementation of the transformation processes in the economy and society.
- *Key problem*: The current SP model **replicates** some elements of existing economic and social system which need to be transformed at the future stages of development.

# The current SP model **replicates** some elements of existing economic and social system which need to be transformed in future: **Labor market policies**

Results of the sociological survey:  
Informal VS Formal employment

Results of the sociological survey:  
Employment rate among men and women

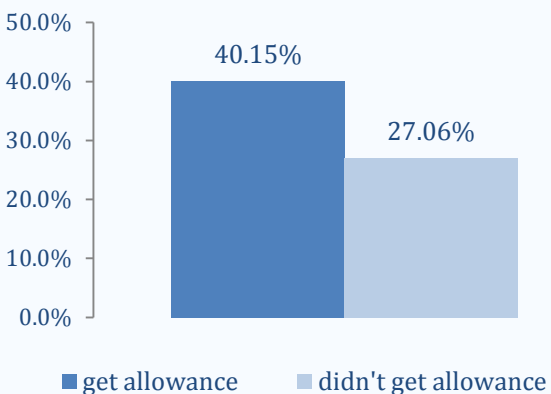

- Labor market policies contribute to generation of relatively low productive employment in industries with low level of technological sophistication;
- In transition period, when the main focus of structural reforms was on development of capital-intensive basic industries, this model of employment was justified;
- In transition period this model allowed to partially compensate negative consequences of structural reforms and ensure employment and source of income for all the social groups;
- In future the model of employment generation needs to be reformed in line with the economic and social transformations.

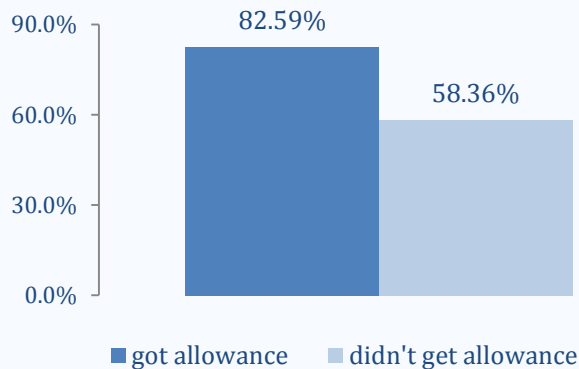

# The current SP model **replicates** some elements of existing economic and social system which need to be transformed in future: **Social Assistance**

Those who think that there is no need to study since there is no opportunity to find a

Those who think that women need education only to take care of the family

Those who think that women should not work and focus on taking care of their family

- Social allowances effectively serve a protective function: proportion of allowances in the structure of income of recipients is considerable (11 - 22% for various recipients);
- However, social assistance does not sufficiently contribute to pulling out recipients from poverty: if allowances are not provided, per capita incomes decline by 1.4%, the share of poor households will remain the same → Transformative function is not fully implemented;
- Demotivating and de-transformative effect of social assistance due to the effect on values and behavioral stereotypes.

## The current SP model **replicates** some elements of existing economic and social system which need to be transformed in future: **Education**

Distribution of students of higher educational institutions by sectoral specialization in Uzbekistan (%)

Distribution of students of higher educational institutions by sectoral specialization in Korea (%)

- Education system also replicates the existing structure of employment and the quality of human capital;
- In the structure of higher education pedagogical specialization dominates → However, expected economic transformations will expand the demand for specialists in processing industries (e.g engineers, chemists).
- The low degree of integration of education with labor market requirements (only 48 % of the employed graduates work on a specialty) also reproduces current model of employment and incomes.

# If the model is replicated and Transformations are not implemented, Sustainability of the SP system will be an issue!

## *Uzbekistan in 2030: Inertial development model*

Structure of employment by sectors

■ Agriculture ■ Industry ■ Services

Formal VS Informal employment in 2030

■ Formal ■ Informal

Demand for Social allowances: 2012 VS 2030

■ Share of social allowances in government budget, % (right)  
 ■ Number of social allowance recipients, thous HH

Revenues and Expenditures of Pension Fund: 2013 VS 2030

— Revenues — Expenditures

- Sustaining the current economy structure → domination of employment, that is low-paid, informal and low-skilled
- Small formal sector → Small contributions to government budget →
- Constraints to the expansion of government budget revenues;
- Limitations to income growth;
- Expanding demand for social allowances;
- Increase in the share of social protection in government budget → Constraints to the fiscal space;
- Deficit of the Pension Fund due to ageing population on the one hand and large informal sector not providing contributions to the Fund on the other hand
- **To provide fiscal space for Social policies and Social protection transformations are important**

# Transformations are essential to ensure sustainability of the SP system!

## Expected results of transformations by 2030

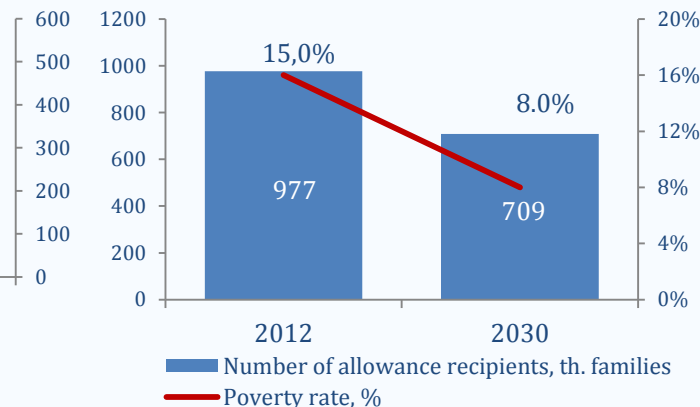

**Uzbekistan: Transformation of GDP structure to 2030, %**

**Transformation of employment structure and wage growth, 2012 VS 2030**

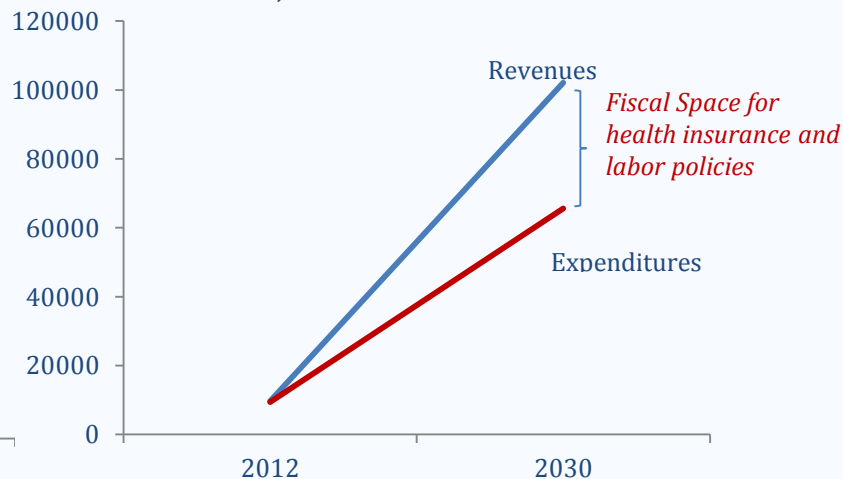

**Poverty reduction and demand for social allowances: 2012 VS 2030**

**Rate of contributions to the Pension Fund: 2012 VS 2030**

**Expenditures of Pension Fund and Distribution of Revenues from 30,8% contributions: 2013 VS 2030**

- Structural transformation → Step rise of formal employment and wages → Income growth → Lower demand for social allowances → Decrease in share of SP in budget → More space for maneuver
- Growth of formal employment → Rise in contributions to Pension fund → Opportunity to decrease the rate of contributions from 30,8% to 20% → 10,8% is fiscal space to be used for health insurance (5%) and labor market programs (5,8%)

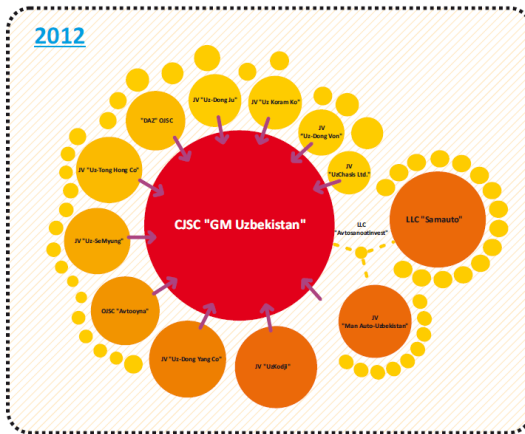

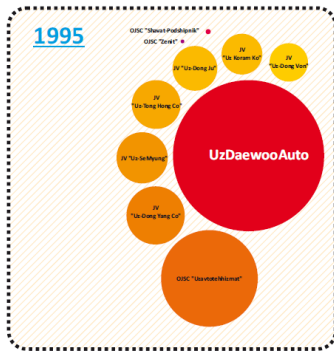

# Transformative Social Protection to implement the transformations

- Transformations are essential to ensure sustainability of the SP system!
- → The new SP model should provide incentives for and be in line with economic and social transformations →
- The SP system in the new conditions should move away from **extensive measures** aimed at providing the guaranteed social assistance to a large groups of the population to the **intensive measures that could have significant multiplier effect** in the terms of stimulating transformative processes.
- Conventional approach to SP should be broadened by:
  - Involving not only protective and preventive, but also promotive and transformative functions;
  - Integrating and consolidating fragmented policies in various sectors (labor market policies, promotion of entrepreneurship, governance reformation).

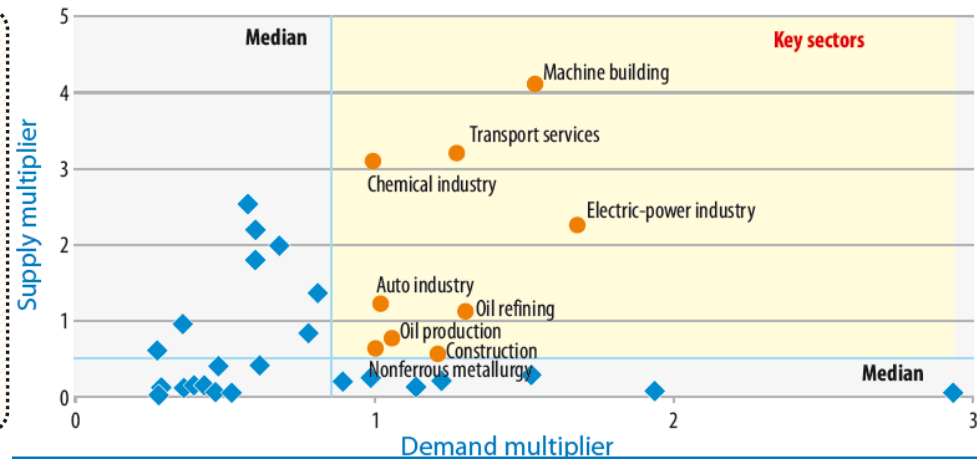

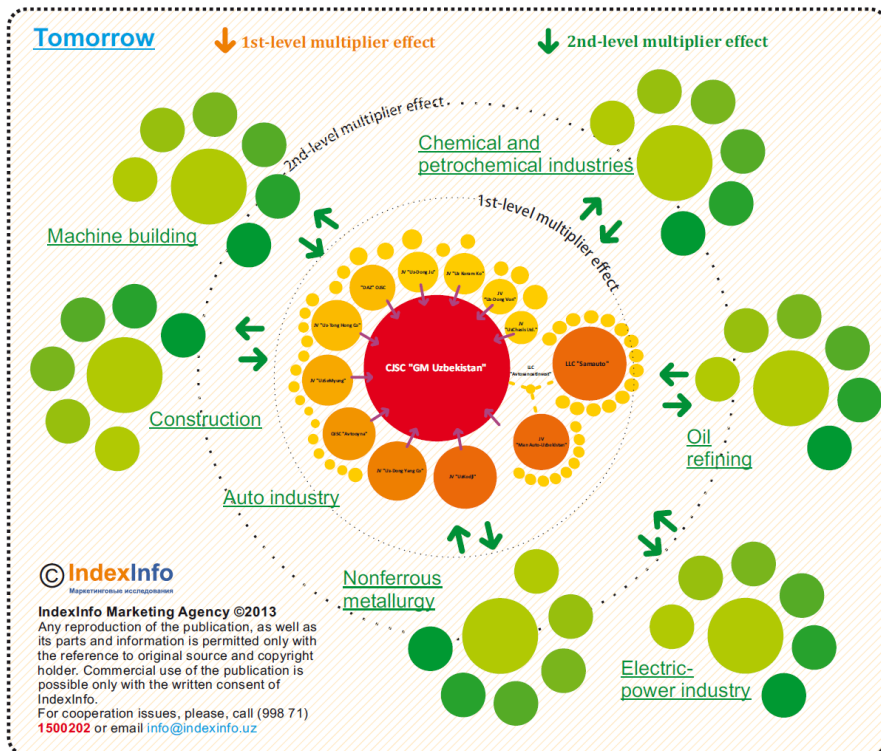

# Transformative Social Protection: Holistic approach is in line with the global discussions

- **Global initiative of Social Protection Floor.** According to this concept, minimum measures of social protection include:
  - Creating guarantees and real opportunities for the provision of basic social rights and social allowances to provide a socially acceptable income for all;
  - Ensuring access for all groups of population to social services such as health, water and sanitation, education, food, housing etc.;
  - Social protection should contribute to economic growth by increasing labor productivity, providing social stability and poverty reduction.
- **Discussions on Post-2015 agenda.** New global goals should be designed on a broader basis: the ultimate goal of social protection is not protection in itself, but resilience, transformative development with social justice and sustained social progress.
- **UNRISD “Social Policy in a Development Context Initiative”.** Rethinking social policy away from its conception as a residual category of “safety nets”. Social policy as a key instrument that works in tandem with economic policy to ensure equitable and socially sustainable development.
- **Research initiative of IDS “Transformative Social Protection”.** Social protection needs to empower marginalized people and be socially “transformative”.

# Key element of the transformative social policy is the effective employment policy

**The future**

- An important factor for developing a sustainable model of social protection for the long term is to build effective employment policies;
- Based on the priorities of economic and social transformations, it is important to create jobs not in low-skilled industries, but generate productive employment in industries with considerable multiplier effects.
- For Uzbekistan these industries are: transport, chemical, gas & oil processing, machine building, construction.
- Expected expansion of employment in these sectors will imply the need to introduce retraining programs to comply available skills with labor market requirements: (annually 100 thous people involved, 104 bln soum a year)

**Social protection policies and measures need to be revised in line with the new pattern of employment and income and provide incentives to accelerate the transformations**

**Allowances**

**Pensions**

**Social infrastructure**

**Social programs**

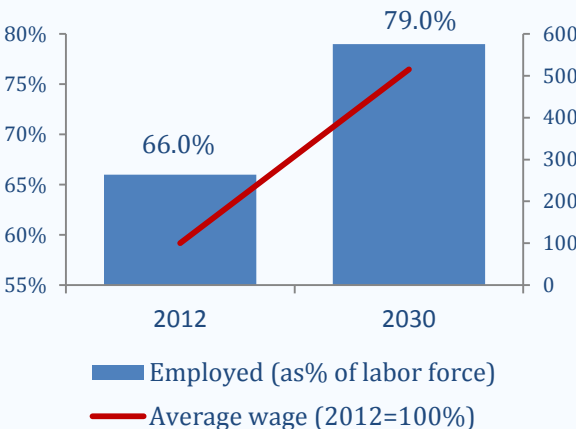

**Education**

**Healthcare**

# The pattern of social protection and social policies by 2030: Social allowances and Pensions

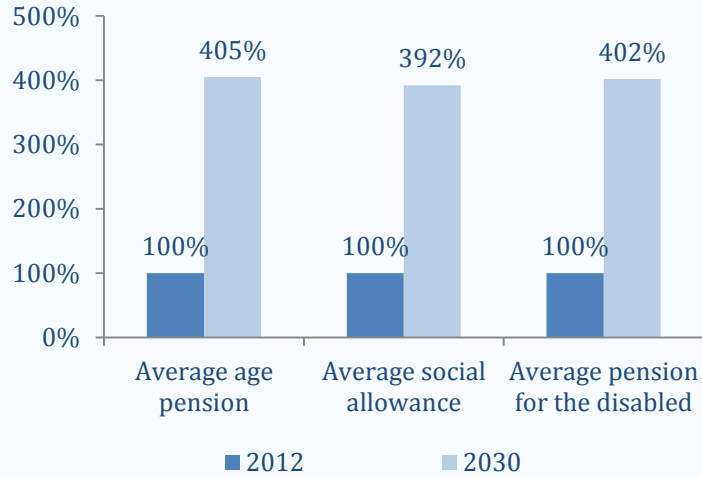

**Employment and wage growth:  
2012 VS 2030**

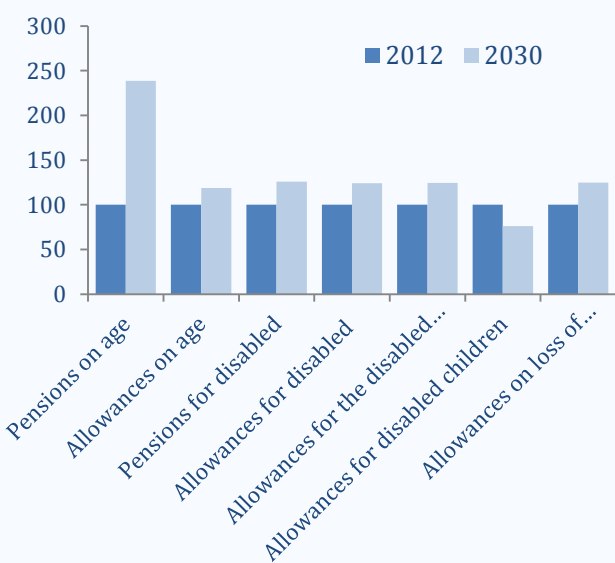

**Poverty reduction and demand for social allowances: 2012 VS 2030**

**Average social allowances and pensions  
(2012 = 100%)**

**Number of pensioners: 2012 =100%**

**Share of working pensioners,  
pensioners total =100%**

*Size of allowances* need to be *increased* to implement transformative effect + *Number of families* receiving *allowances* will decrease in future due to employment & income growth

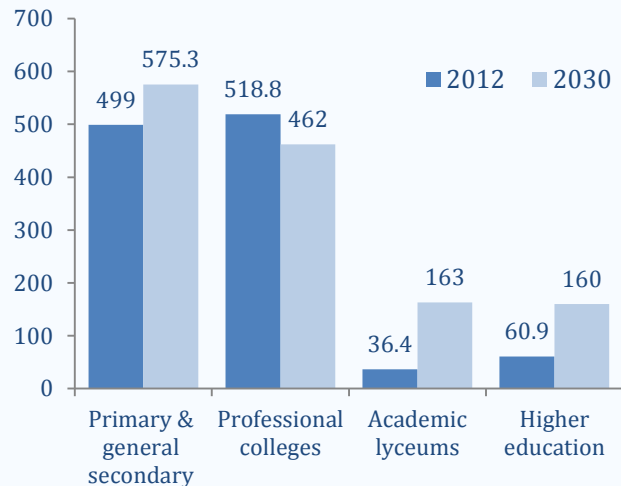

*Number of pensioners* increased + *amount of pensions increased* due to the growth of wages and employment + number of *working pensioners* increased due to the employment generation and transformative social policies

# The pattern of social protection and social policies by 2030: Education and Healthcare

Per capita expenditures on education  
(2012 = 100%)

Number of students: 2012 - 2030 (thous)

Breakdown of financing in

Per capita health expenditures  
(2012=100%)

Breakdown of financing of healthcare services 2030

- Improvement in living standards + change in the demographic and social structure of society
- → transformation of the lifestyle and behavioral stereotypes
- → expanding demand for the high quality social services
- → Per capita expenditures on education and healthcare need to be expanded
- → This will imply the model of financing of education and healthcare to be reformed

# **Main findings: What is transformative social protection for a transforming Uzbekistan?**

- Transformation of the social protection system in line with economic, social and institutional transformations;
- Acceleration of the transformative processes in the economy and society to ensure sustainability of the Social protection system;
- Transformation of people to empower the poor and vulnerable to make use of opportunities available to them for improving their livelihoods in a sustainable manner:
  - addressing power imbalances, that create social exclusion;
  - developing new skills for decent employment and economic activity (retraining, discounted loans for education);
  - developing socially positive way of thinking (e.g. social rehabilitation courses) and thus, stimulating social and behavioral changes.

# Questions for discussion

- Are there any dimensions, critical issues which were omitted, should get considered in more detail?
- What approaches, methods and indicators need to be revised?
- What's next? How can we jump to formulating the detailed Action Plan and Road Map? Suggested formats and models.
- Are there windows for synergies?

# Thank you!

The image is a collage of digital resources for CER Uzbekistan, set against a blue and purple abstract background with glowing lines. The resources are arranged in a circular flow:

- Read >**: A book cover titled "Uzbekistan Economic Trends" with a blue circle containing the letter 'R' next to it.
- Share >**: A Facebook page for CER Uzbekistan with a blue circle containing the letter 'S' next to it. The page features a post with the text "For Development the Sky is the Limit!" and a Facebook logo.
- Discuss >**: A research paper titled "Transformation" with a blue circle containing the letter 'C' next to it. The paper discusses "The Transport Sector: Shift Reductions as a Means to Economic Growth".
- Download >**: A tablet displaying the CER website with a blue circle containing the letter 'D' next to it. The website URL [www.cer.uz/publications/](http://www.cer.uz/publications/) is visible above the tablet.
